

KHUSTAR HUSSAIN

Java Developer | Backend Developer (Spring Boot)

Siwan, Bihar | +91-9234957966 | khustarhussain8@gmail.com | github.com/khustar04 | linkedin.com/in/khustarhussain04/

SUMMARY

Recent B.Tech graduate (AI & ML) with hands-on backend development experience in Java, Spring Boot, and Spring Security, plus front-end experience in React.js. Built two full-stack projects — including a production-grade DSA tracking platform with OAuth, JWT, and email verification — with role-based access control and RESTful APIs across multiple endpoints. Strong foundation in data structures, algorithms, and relational database design, actively seeking a Java Developer role to apply and grow these skills in a production environment.

SKILLS

Core Java: OOPs, Collections, Multithreading, Exception Handling

Backend Frameworks: Spring Boot, Spring MVC, Spring Security, J2EE, Hibernate ORM, REST APIs, JWT, OAuth 2.0, Maven

Testing: JUnit, Mockito

Frontend: HTML, CSS, JavaScript, React.js, Tailwind CSS, Recharts

Database: SQL, RDBMS, MySQL, PostgreSQL

Tools & Platforms: IntelliJ IDEA, VS Code, Spring Tool Suite, Postman, Git, GitHub

Core Concepts: Object-Oriented Programming, DBMS, Computer Networks

PROJECTS

Streakify — Gamified DSA Tracking Platform *Spring Boot, Spring Security, JWT, MySQL, React 18, Vite, Recharts, REST API*

- Built a full-stack DSA revision platform with a stateless Spring Boot 3.3 REST backend (8 controllers) and a React 18 + Vite SPA frontend.
- Implemented multi-provider authentication: email/password sign-up with BCrypt hashing, Google OAuth 2.0 sign-in, and email OTP verification via SMTP.
- Designed a custom JWT authentication filter using JWT (HMAC-SHA512) with 24-hour access tokens and 7-day refresh tokens, integrated with Spring Security's stateless SecurityContextHolder.
- Modeled 11 entities and repositories using Spring Data JPA/Hibernate across a normalized MySQL 8.0 schema (11 tables) covering users, custom sheets, problem notes, badges, friendships, and daily activity.
- Built a custom sheet engine and curated A2Z problem tracker with per-problem complexity notes, alongside a gamification system with streaks, badges, and a 365-day activity heatmap.
- Engineered a friend-graph leaderboard with multi-metric sorting, and hardened the API with centralized exception handling, file-upload validation, and object-level access control.

AI-Powered Resume-Based Job Finder

React.js, Gemini API, Adzuna API, Apache Tika, JSON

- Built an AI-enabled resume analysis module to extract skills, experience level, and target roles from uploaded resumes (PDF/DOC), parsed using Apache Tika.
- Integrated external job-listing APIs to fetch and filter relevant openings based on user profile match.
- Developed a ranking engine to score and sort job listings by skill fit, relevance, and recency.
- Built a dashboard displaying resume score, missing skills, and AI-generated improvement suggestions with date-based sorting for new postings.

CERTIFICATIONS

- HackerRank Certified — Java (Basic) (2025)
- HackerRank Certified — Software Engineer (2025)
- AWS Academy Graduate — AWS Academy Cloud Foundations (2025)
- HackerRank Certified — JavaScript (Intermediate) (2025)

EDUCATION

Technocrats Institute of Technology Excellence

B.Tech, Artificial Intelligence & Machine Learning | Bhopal, Madhya Pradesh

June 2022 – June 2026

Z.A. Islamia College

Science – Intermediate | Siwan, Bihar

Feb 2020 – Feb 2022
